Provide a title for your proposal that is no more than 80 characters including spaces.:

Providing postpartum care in tandem with well newborn visits.

Describe the problem, or gap in practice or knowledge you are addressing; and what the learner can expect to take away from this education.: Family physicians are trained to care for the family system. With rising maternal morbidity rates, especially in the post-partum period, family physicians can leverage the ability to care for parents and babies using the newborn well visits. During this structured period for the newborn family physicians can conduct co-visits with birthing parents. Maternal postpartum care should give special attention to heart disease, mental health and substance use disorders as these are currently the leading causes of preventable death in the year after delivery.

Provide a description regarding how this education has a direct bearing on patient care, or how it supports the physician's role in patient care, or how it has a direct bearing on a physician's ability to deliver patient care.: This education will support physicians who wish to include postpartum care in their routine outpatient practice by providing a framework. This framework will include recommended visit intervals, screening tools, and resources. It will highlight opportunities to care for the maternal-child dyad. Physicians will learn specific monitoring techniques to decrease mortality in their communities.

Select all that apply.: Screening, Treatment/Management, Care Coordination

Objective 1: Identify opportunities to conduct co visits in the first year postpartum.

Objective 2: Appropriately screen and monitor post-partum patients who are at risk for cardiomyopathy, cardiovascular complications, and diabetes after delivery.

Objective 3: Identify and treat postpartum mood disorders and substance use disorders.

Objective 4: Use community resources to assist with issues associated with social determinates of health.

Objective 5:

Practice Change 1: Standardize the use of screening tools at birthing parent and pediatric appointments across the first year postpartum.

Practice Change 2: Routinely identify patients who have or are at risk for cardiomyopathy, eclampsia syndromes or diabetes.

Practice Change 3: Connect your practice with local resources for new parents.

Please select all that apply with respect to your proposal.: Medical knowledge, Patient Care, Systems-based practice
